flowers are extremely diverse across species and contain many small parts that are sometimes difficult to see with the naked eye or even a hand lens. For that reason, this publication covers only a few broad characteristics that can aid in narrowing the identity of a plant. Flower parts (Figures 9-11).

Plant Identification Basics - MSU Extension

greenish-yellow perfect or staminate flowers are arranged in a raceme at the end of twigs. The fruit is a fused, double-winged samara. Seasonal Development Flowering and leaf emergence occur simultaneously in late March or April. Fruit ripening generally occurs between September and October, and seed is dispersed from October through January.
