Global optimization is concerned with the computation and characterization of global optima of nonlinear functions. During the past three decades the field of global optimization has been growing at a rapid pace, and the number of publications on all aspects of global optimization has been increasing steadily.

local solutions is not known a priori, and the quality of local and global solutions may differ substantially. Therefore these decision models can be very difficult, and as a rule standard optimization strategies are not directly applicable to solve them. Hence, one needs to rely on proper global optimization (GO) concepts and techniques.
