Animal euthanasia (euthanasia from Greek: ἑὐθανασία, ἑὐ- "good" + θάνατος, "death"; "good death") is the act of putting an animal to death or allowing it to die by withholding extreme medical measures. Reasons for euthanasia include incurable (and especially painful) conditions or diseases, lack of resources to continue supporting the animal, or laboratory test procedures.

Animal euthanasia - Wikipedia

Hearing range describes the range of frequencies that can be heard by humans or other animals, though it can also refer to the range of levels. The human range is commonly given as 20 to 20,000 Hz, although there is considerable variation between individuals, especially at high frequencies, and a gradual loss of sensitivity to higher frequencies with age is considered normal.

Hearing range - Wikipedia

Mississippi State University is an equal opportunity institution. Discrimination in university employment, programs or activities based on race, color, ethnicity, sex, pregnancy, religion, national origin, disability, age, sexual orientation, genetic information, status as a U.S. veteran, or any other status protected by applicable law is prohibited.

The Cruelty to Animals Act (15 August 1876) was the world's first legislation to regulate the use and treatment of live animals in scientific research. This essay overviews the passage and provisions of the legislation, approaching the Cruelty to Animal Act as a site through which to examine the place of animals in clashes between an experimental medical science insisting on its professional ...

[Previous page] [Table of Contents] Chapter 11 - Biological Safety Cabinets. Biological safety cabinets (BSCs) provide effective primary containment for work with infectious material or toxins when they are properly maintained and used in conjunction with good microbiological laboratory practices. The various classes and types of BSCs operate under the same basic principles.

Chapter 11-15 - Canadian Biosafety Handbook, Second

L Object = Luminance of the object. L Background = Luminance of the background. If we use the luminance values shown in the upper portion of the figure we can calculate that the lower portion of the cylinder, where the roadway is the background, has a contrast of $(1-22)/22 = -0.95$, with the negative value denoting that it is negative contrast.
