hardware-Software Co-Design for embedded Systems

hardware-software co-design are critical research topics for embedded system design. Hardware-software co-design of embedded systems must be performed at several different levels of abstraction, but the highest levels of abstraction in co-design are more abstract than the typical software coder or ASIC designer may be used to.

Hardware-software co-design of embedded systems

This handbook presents fundamental knowledge on the hardware/software (HW/SW) codesign methodology. Contributing expert authors look at key techniques in the design flow as well as selected codesign tools and design environments, building on basic knowledge to consider the latest techniques.
