Computational Design of Hierarchically Structured Materials

While this view of multi-scale materials modelling and characterization is widely accepted and used, there are a number of conceptual, theoretical, and applied challenges that remain unresolved, e.g., rigorous definition of distinct structural scale, robust approach to the validation of multi-scale modelling frameworks, etc.

Many mineralized biological materials are hierarchically structured beginning at the smallest length scale with mineral nano-fibers, -platelets, or -spheres which are embedded within proteins and are arranged into superordinate structures at larger size levels.

On the mechanical properties of hierarchically structured

Until now, many successful examples have been reported for the preparation of hierarchically porous materials by combining a single templating method with a supplementary chemical or physical method. The chapter provides an introduction to the synthesis strategies for the preparation of hierarchically porous materials using the dual and multiple micellar templates in hierarchically porous material synthesis.
