system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller,

High-Frequency Amplifier Transistor (20V, 50mA, 1.5GHz)

introduced. SiGe transistor, transit time, and cutoff frequency are explained. Several bipolar transistor models are introduced, i.e. , Ebersâ€™Moll model, small-signal model, and charge control model. Each model has its own areas of applications. The bipolar junction transistor or BJT was invented in 1948 at Bell Telephone Laboratories, New Jersey, USA.
