Synthetic polymers are human-made polymers. From the utility point of view they can be classified into four main categories: thermoplastics, thermosets, elastomers and synthetic fibers. They are found commonly in a variety of consumer products such as money, glue, etc.

Ultra-high-molecular-weight polyethylene (UHMWPE, UHMW) is a subset of the thermoplastic polyethylene. Also known as high-modulus polyethylene, (HMPE), it has extremely long chains, with a molecular mass usually between 3.5 and 7.5 million amu. The longer chain serves to transfer load more effectively to the polymer backbone by strengthening intermolecular interactions.

For high performance conjugated polymers with well-defined structures from a broad array of substrates, a transition metal-catalyzed cross-coupling polycondensation is typically utilized, such as Migita-Kosugi-Stille [], Suzuki-Miyaura [23,24], Kumada-Corriu [], Negishi [], Murahashi [], and Yamamoto (reductive coupling) [] methods, which necessitate the functionalization of one coupling site ...

ISOLUTE® FILTER+ plates provide effective, workflow friendly filtration of biological samples, perfect for use prior to UPLC-MS/MS analysis. ISOLUTE FILTER+ plates are designed to prevent sample particulates from reaching the analytical UPLC column, protecting the analytical system from particulate build up over time.
