An intermediate-mass black hole might be lurking within a dense stellar cluster – a discovery that could point toward how these oddities form.

Best Evidence Yet for an Intermediate-Mass Black Hole

A black hole is a region of spacetime exhibiting such strong gravitational effects that nothing – not even particles and electromagnetic radiation such as light – can escape from inside it. The theory of general relativity predicts that a sufficiently compact mass can deform spacetime to form a black hole. The boundary of the region from which no escape is possible is called the event horizon.
