Cells and Tissues of the Immune System Cells normally present as circulating cells in the blood and lymph, as collections in lymphoid organs, and as scattered cells in all tissues except the CNS The

### **Cells and Tissues of the Immune System - users.ipfw.edu**

In abnormal situations, the immune system can mistake self for nonself and launch an attack against the body's own cells or tissues. The result is called an autoimmune disease. Some forms of arthritis and diabetes are autoimmune diseases. In other cases, the immune system responds to a seemingly harmless foreign substance such as ragweed pollen.

### **Understanding the Immune System: How it works - IMGT**

Lymph nodes are extremely important in responses to pathogens, especially those that an individual has not previously encountered. Proteins from the pathogen will reach dendritic cells in the lymph node, or will be carried to the lymph node by migrating dendritic cells, and protein fragments will be "presented" to T cells.
