In part one of this two-volume sequence, Implantable Neural Prostheses 1: Devices and Applications, the focus is on implant designs and applications. Devices covered include sensory prosthetic devices such as cochlear implants, auditory midbrain implants, visual implants, spinal cord stimulators, and motor prosthetic devices including deep brain stimulators, Bions, and cardiac electro-stimulators.

This book and its companion volume describe state-of-the-art advances in techniques associated with implantable neural prosthetic devices and their applications. They offer researchers, engineers, clinicians, students and any specialists in this field a deeper understanding of the neural prosthetic techniques currently available for a wide range of biomedical applications.

### **Implantable Neural Prostheses 2 - Techniques and**

In part two of this two-volume sequence, Implantable Neural Prostheses: Techniques and Engineering Approaches, the focus is on general techniques, platforms, and engineering approaches in research and development. Coverage includes biocompatibility, electrode materials and testing, electrochemical techniques for neural stimulation applications ...
