Functional magnetic resonance imaging or functional MRI (fMRI) measures brain activity by detecting changes associated with blood flow. This technique relies on the fact that cerebral blood flow and neuronal activation are coupled. When an area of the brain is in use, blood flow to that region also increases.

1. Introduction. The objective of the present studies was to demonstrate that cryobiological techniques can be used to enable brain banking to support the needs of fields such as the emerging domain of whole brain connectomics .Connectomics is the study of the totality of all neuronal connections in individual brains so as to better understand the functions of the brain and the emergence of ...

A mirror neuron is a neuron that fires both when an animal acts and when the animal observes the same

action performed by another. Thus, the neuron "mirrors" the behavior of the other, as though the observer were itself acting. Such neurons have been directly observed in primate species. Birds have been shown to have imitative resonance behaviors and neurological evidence suggests the presence ...

Having previously established that lonely people suffer from higher mortality than people who are not lonely, researchers are now trying to determine whether that risk is a result of reduced social resources, such as physical or economic assistance, or is due to the biological impact of social isolation on the functioning of the human body (UCLA News Release, September 13, 2007).

Firms are usually best off with a portfolio that has a balance of firms in each category. The cash cows tend to generate cash but require little future investment. On the other hand, stars generate some cash, but even more cash is needed to invest in the future for research and development, marketing campaigns, and building new manufacturing facilities.
