In the mathematical field of topology, a uniform space is a set with a uniform structure. Uniform spaces are topological spaces with additional structure that is used to define uniform properties such as completeness, uniform continuity and uniform convergence.. The conceptual difference between uniform and topological structures is that, in a uniform space, one can formalize certain notions of ...

Functional analysis is a branch of mathematical analysis, the core of which is formed by the study of vector spaces endowed with some kind of limit-related structure (e.g. inner product, norm, topology, etc.) and the linear functions defined on these spaces and respecting these structures in a suitable sense. The historical roots of functional analysis lie in the study of spaces of functions ...

The retina of the human eye has two categories of light receptor: rods, which are active in dim light and have no color sensitivity, and cones, which are active in bright light and provide us with our ability to discriminate color. You probably learned that the three types of cone are sensitive to red, green, and blue (R, G, and B).

Preface. This introduction to R is derived from an original set of notes describing the S and S-PLUS environments written in 1990–2 by Bill Venables and David M. Smith when at the University of Adelaide. We have made a number of small changes to reflect differences between the R and S programs, and expanded some of the material.

This article helps the new DB2(R) database administrator understand the importance of table spaces and buffer pools. The article also explains how properly designing and tuning table spaces and buffer pools can enhance database performance. [Originally written in 2002, this article has been updated for IBM DB2 V9.7 for Linux(R), UNIX(R), and Windows(R).]
