An inverse problem in science is the process of calculating from a set of observations the causal factors that produced them: for example, calculating an image in X-ray computed tomography, source reconstruction in acoustics, or calculating the density of the Earth from measurements of its gravity field.. It is called an inverse problem because it starts with the results and then calculates ...

Section 4-3 : Inverse Laplace Transforms. Finding the Laplace transform of a function is not terribly difficult if we've got a table of transforms in front of us to use as we saw in the last section. What we would like to do now is go the other way.

In probability theory, the inverse Gaussian distribution (also known as the Wald distribution) is a two-parameter family of continuous probability distributions with support on $(0, \infty)$.. Its probability density function is given by $f(x; \mu, \lambda) = \sqrt{\frac{\lambda}{2\pi x^3}} \exp\left\{-\frac{\lambda}{2x} \left(\frac{x}{\mu} + \frac{\mu}{x}\right)\right\}$ for $x > 0$, where μ is the mean and λ is the shape parameter.. As λ tends to infinity, the inverse Gaussian distribution becomes more ...

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.
