Parallel computing is a type of computation in which many calculations or the execution of processes are carried out simultaneously. Large problems can often be divided into smaller ones, which can then be solved at the same time. There are several different forms of parallel computing: bit-level, instruction-level, data, and task parallelism. ...

Go 2, here we come! 29 November 2018. Background. At GopherCon 2017, Russ Cox officially started the thought process on the next big version of Go with his talk The Future of Go (). We have called this future language informally Go 2, even though we understand now that it will arrive in incremental steps rather than with a big bang and a single major release.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
