In this lecture, we introduce the motivations for studying conformal field theory. We begin with some examples of classical conformal invariance, before moving on to talk about CFTs in critical phenomena and the renormalization group.

Lectures #2 and #3 discuss gauge theory with finite gauge group, our toy model. Lecture #4 is an introduction to the rich geometry of classical Chern-Simons theory.

Lectures on Topological Quantum Field Theory Daniel S. Freed

In this lecture, we also wish to help the current or future enthusiastic empiricists and (possible) despisers of theory among you to appreciate that empirical observations “however banal they may be” are never free of theoretical statements; there is, therefore, no harm in engaging with theory on an ongoing basis.

theory? Reason 1. String theory is a theory of quantum gravity String theory uni es Einsteinâ€™s theory of general relativity with quantum mechanics. Moreover, it does so in a manner that retains the explicit connection with both quantum theory and the low-energy description of spacetime. But quantum gravity contains many puzzles, both technical and conceptual.
