10 The Exponential and Logarithm Functions Some texts define $\log_b x$ to be the inverse of the function $f(x) = b^x$. This approach enables one to give a quick definition of \log_b and to overcome a number of technical difficulties, but it is an unnatural way to define exponentiation.

LOGARITHMS AND THEIR PROPERTIES Definition of a logarithm: If a is a constant, then if and only if $y = a^x$. In the equation $y = a^x$, a is referred to as the logarithm, a is the base, and x is the argument. The notation $\log_a x$ is read "the logarithm (or log) base of x ". The definition of a logarithm indicates that a logarithm is an exponent.

Worksheet 2:7 Logarithms and Exponentials Section 1 Logarithms The mathematics of logarithms and exponentials occurs naturally in many branches of science. It is very important in solving problems related to growth and decay. The growth and decay may be that of a plant or a population, a crystalline structure or money in the bank. Therefore

Working with Exponents and Logarithms What is an Exponent? The exponent of a number says how many times to use the number in a multiplication. In this example: $2^3 = 2 \times 2 \times 2 = 8$ (2 is used 3 times in a multiplication to get 8) What is a Logarithm? A Logarithm goes the other way.

Rational Functions, Logarithms & Exponentials 14 Exponential Functions If $b > 0$ and $b \neq 1$ then an exponential function is a function in the form, $f(x) = b^x$ where b is called the base and x can be any real number. Notice that the x is now in the exponent and the base is a fixed number. Example: Sketch the graph of $f(x) = 2^x$
