stability. The desired electrical properties can be outlined as low dielectric constant, low dielectric loss and leakage current, and high breakdown voltage. As RC delay and crosstalk are primarily determined by the dielectric constant, in a typical CVD SiO₂ film, the dielectric constant is around 4.

Natural Dielectric One-component homogeneous dielectric material. Solid natural dielectric types include plastics, metal oxides, glasses, semiconductors (silicon, etc.) and pure single crystals (diamond, sapphire, quartz). Adjusted Property Dielectrics Composite or mixture materials formulated to specific values of dielectric constant and loss tangent.

was delayed until the 1970s when the first low loss, temperature stable, high dielectric constant ceramic material was developed. Since then, many new and improved materials that exhibit a wide range of dielectric constant, extremely low loss, and excellent temperature stability have been developed. TRAK Ceramics, Inc.
