Tetrahedron | Low Molecular Weight Organic Gelators

The integration of renewable energy sources into the electric grid requires low-cost energy storage systems that mediate the variable and intermittent flux of energy associated with most renewables. Nonaqueous redox-flow batteries have emerged as a promising technology for grid-scale energy storage applications.

Evolutionary Design of Low Molecular Weight Organic

Well known gel systems include, for instance, dilute solutions of polymers, proteins, and surfactants in water and organic solvents. These gel systems are important in medicine, biology, chemistry, and physics, and find many applications in the photographic, cosmetics, food, and petroleum industries [1].

Low Molecular Weight Gelators for Organic Solvents

Low-molecular-weight organic acids are considered to be effective in the release of inorganic phosphorus (P) but their effectiveness to mobilize organic P is not well understood.

Method for Characterization of Low Molecular Weight

However, knowledge of how low-molecular-weight organic acids (LMWOAs) secreted by plants in agricultural soils mediate the dissolution of HANPs and release of dissolved phosphate is nonexistent. Here, three of the most commonly occurring LMWOAs (acetic, oxalic, and citric acids) were evaluated for their roles in HANPs dissolution in both batch ...

The structural composition of PM_{2.5} monitored in the atmosphere is usually divided by the analysis of organic carbon, black (elemental) carbon, and inorganic salts.

A method for characterization of low molecular weight

A range of low-molecular-weight organic acids, including oxalic, formic, citric, malic, and acetic acids, are produced in soils from the decomposition of organic matter, root exudates, and microbial metabolites (Stevenson 1967; Graustein et al. 1977; Lynch 1978; Cromack et al. 1979; Fox and Comerford 1990).
