conomic theory (including game theory). This approach assumes that economic decisions are made for a reason. People are assumed to have a well-defined objective in life (represented by preferences). Various constraints (imposed by nature, markets, the government, etc.) place restrictions on how this objective can be achieved.

macroeconomic models used in research today are of this kind. Their history, however, is not that long: the first models began to be formulated in the 1970s. In constructing the macroeconomic framework, the guiding principle will be an aim to organize the main macroeconomic facts: the aim is to construct a quantitative theory.

methods feel that modern macroeconomic theory, with its insistence on micro-economic rigor, obscures the forest for the trees. Perhaps some instructors trained in modern methods feel that the modern approach is simply too complicated (mathematical) for the average undergraduate to absorb. Whatever the reasons, I believe that they are all wrong.
