hundred degrees, depending on distance from the plume, so that lithosphere formed on either plate would have higher heat-flow. The plume should also have direct effects on

Mantle plumes: heat-flow near Iceland

The mantle is a layer inside a planetary body bounded below by a core and above by a crust. Mantles are made of rock or ices, and are generally the largest and most massive layer of the planetary body. Mantles are characteristic of planetary bodies that have undergone differentiation by density. All terrestrial planets (including Earth), a number of asteroids, and some planetary moons have mantles.

The hotspot concept for the evolution of the South Atlantic has generally been explained by active hotspot/mantle plumes being located along or close to the ridge axis, generating trails of volcanic islands and seamounts as the plate migrates over the hotspot.

In geology, the mesosphere refers to the part of the Earth's mantle below the lithosphere and the asthenosphere, but above the outer core. The upper boundary is defined by the sharp increase in seismic wave velocities and density at a depth of 660 kilometers (410 mi). At a depth of 660 km, ringwoodite (γ -(Mg,Fe)₂SiO₄) decomposes into Mg-Si perovskite and magnesiowüstite.

A good understanding of Colorado's physical history and rocks requires a feel for large-scale geodynamics. This groundwork article attempts to provide just that context while supporting the photojournals and other groundwork articles that draw on such ideas. Most importantly, this article seeks to provide a basis for appreciating if not answering the \$64,000 geo-question about Colorado:

Analogue models of lithospheric deformation and fluid dynamic models of mantle flow mostly use some kind of syrup such as honey or glucose syrup to simulate the low-viscosity sub-lithospheric mantle.

Pegmatitic rocks are very coarse-grained crystalline rocks which, in places, contain giant crystals of feldspar, quartz or mica that render this felsic lithology to strongly contrast with compositionally similar granites often

lying in their close vicinity.
