Hence, many valued topological spaces play a significant role in various fields of mathematics - e.g., in the theory of locales, convergence spaces, stochastic processes, and smooth Borel probability measures. In its first part, the book develops the necessary categorical basis for general topology.

Remark 3.10. In [18], Zhang gave an enriched approach to many valued topology. If  $*$  is also distributive over arbitrary meets, then the  $L$ -topology induced by  $L$ -neighborhood system in this paper ...

complete ortholattice there exists a specific many valued topology such that order convergence is  $L$ -topological (cf. Section 3). The study of the functorial relationship between 2-valued topological spaces and many valued topological spaces has a long history (cf. [19], [22], [16]) and revolves around the omega-functor  $\hat{\omega}_L$  which is the restriction of  $\hat{\omega} : L \rightarrow TOP$ .
