energy,  $E$ , and mass,  $m$ , are basically the same things ( $E = mc^2$ ), physicists conveniently state mass as  $M = E/c^2$ , and then drop the speed-of-light factor  $c^2$  because it is understood to be part of the definition of mass when energy units are used as in the table above.

FUNDAMENTAL PARTICLES AND INTERACTIONS The Standard Model summarizes the current knowledge in Particle Physics. It is the quantum theory that includes the theory of strong interactions (quantum chromodynamics or QCD) and the unified theory of weak and electromagnetic interactions (electroweak).

Physical Origin of Elementary Particle Masses ... Abstract: In contemporary particle physics, the masses of fundamental particles are incalculable constants, being supplied by experimental values. Inspired by observation of the empirical particle mass spectrum, and their corresponding physical interaction couplings, we ...

Abstract: In the original paper entitled, "Masses of Fundamental Particles"(arXiv:1109.3705v5, 10 Feb 2012), not only the masses of fundamental particles including the weak bosons, Higgs boson, quarks, and leptons, but also the mixing angles of quarks and those of neutrinos are all explained and/or predicted in the unified composite models of quarks and leptons successfully.

Elementary bosons responsible for the four fundamental forces of nature are called force particles (gauge bosons). Strong interaction is mediated by the gluon , weak interaction is mediated by the W and Z bosons.

The Standard Model of particle physics is the theory describing three of the four known fundamental forces (the electromagnetic, weak, and strong interactions, and not including the gravitational force) in the Universe, as well as classifying all known elementary particles.
