A Mathematical Approach to Territorial Pattern Formation Jonathan R. Potts and Mark A. Lewis Abstract. Territorial behavior is widespread in the animal kingdom, with creatures seeking to gain parts of space for their exclusive use. It arises through a complicated interplay of many different behavioral features.

Although design patterns are reusable design elements, existing pattern descriptions focus on specific solutions that are not easily reusable in new designs. This paper introduces a new pattern description method for object oriented design patterns.

The following denotes the mathematical notations used in the solving method: Let $x y = y^{-1} * x * y$ denote conjugation and $[x, y] = x^{-1} * y * x * y$ denote the commutator, for x, y group elements.

Algebraic Thinking: A Problem Solving Approach Will Windsor Griffith University <w.windsor@griffith.edu.au> Algebraic thinking is a crucial and fundamental element of mathematical thinking and reasoning. It initially involves recognising patterns and general mathematical relationships among numbers, objects and geometric shapes.
