but existing analysis does not explain this success as it relies heavily on convexity to control variance. Since Sgd dominates large-scale nonconvex optimization (including neural network training), it is of great value to develop and analyze faster nonconvex stochastic methods.

Such an assumption is typical in the analysis of first-order methods. One crucial aspect of the analysis for nonsmooth nonconvex problems is the convergence criterion.

Fast Stochastic Methods for Nonsmooth Nonconvex Optimization

convex relaxations for nonconvex polynomial optimization problems. Techniques such as outer-approximation, branch-and-bound (B&B) algorithms, reformulation-convexification methods are convex relaxation based [1]. Convex extensions and envelopes are of primary importance to the efficiency of global optimization methods.

Fast Stochastic Methods for Nonsmooth Nonconvex Optimization Anonymous Author(s) Affiliation Address email Abstract 1 This paper studies stochastic algorithms for optimizing nonconvex, nonsmooth 2 finite-sum problems, where the nonconvex part is smooth and the nonsmooth part 3 is convex. Surprisingly, unlike the smooth case, our knowledge of this fundamental
