Indeed, the biosorption of metal ions is a metabolism-independent metal accumulation event, which takes place at the cell wall by polysaccharides, associated molecules, and functional groups.

autotrophic microbes were isolated and adapted for metal tolerance and biosorption potentiality. The multi-metal tolerance was developed with higher gradient of concentrations of Ag, As, Bi, Cd, Cr, Co, Cu, Hg, Li, Mo, Pb, Sn and Zn.

Bioremediation of toxic heavy metals using

Microbial biomass provides a metal sink, by biosorption to cell walls, pigments and extracellular polysaccharides, intracellular accumulation, or precipitation of metal compounds in and/or around cells, hyphae or other structures.

Microscopic Investigations on the Biosorption of Heavy

Bacterial biosorption is mainly used for the removal of pollutants from effluents contaminated with pollutants

that are not biodegradable, like metals ions and dyes.

Microorganisms and Biosorption of Heavy Metals in the

Table 2 summarizes some of the important results of metal biosorption using bacterial biomasses. A direct comparison of experimental data is not possible, due to different systematic experimental conditions employed (pH, pH control, temperature, equilibrium time and biomass dosage).
