Oral microbiology is the study of the microorganisms (microbiota) of the oral cavity and their interactions between oral microorganisms or with the host. The environment present in the human mouth allows the growth of characteristic microorganisms found there. It provides a source of water and nutrients, as well as a moderate temperature. Resident microbes of the mouth adhere to the teeth and ...

Lyme disease, or borreliosis, is caused by spirochetal bacteria from the genus *Borrelia*, which has 52 known species. Three main species (*Borrelia garinii*, *Borrelia afzelii*, and *Borrelia burgdorferi* s.s.) are the main causative agents of the disease in humans, while a number of others have been implicated as possibly pathogenic. *Borrelia* species in the species complex known to cause Lyme disease ...

Lyme disease microbiology - Wikipedia

The American Society for Microbiology (ASM) is the oldest and largest single life science membership organization in the world. Membership has grown from 59 scientists in 1899 to more than 39,000 members today, with more than one third located outside the United States. The members represent 26 disciplines of microbiological specialization plus a division for microbiology educators.
