A microRNA (abbreviated miRNA) is a small non-coding RNA molecule (containing about 22 nucleotides) found in plants, animals and some viruses, that functions in RNA silencing and post-transcriptional regulation of gene expression. miRNAs function via base-pairing with complementary sequences within mRNA molecules. As a result, these mRNA molecules are silenced, by one or more of the following ...

Programmed death-ligand 1 (PD-L1) also known as cluster of differentiation 274 (CD274) or B7 homolog 1 (B7-H1) is a protein that in humans is encoded by the CD274 gene.. Programmed death-ligand 1 (PD-L1) is a 40kDa type 1 transmembrane protein that has been speculated to play a major role in suppressing the immune system during particular events such as pregnancy, tissue allografts, autoimmune ...

Circulating microRNAs meet the three key criteria of valuable biomarkers: measurability, validation and utility. The analysis of circulating miRNAs is rapidly advancing and clinical applications are on the verge of becoming reality.

The 6th Annual Translational Research Symposium will be held on Thursday 26 July at the Translational Research Institute, Brisbane. This year the theme is "Careers Beyond Academia" with the aim to promote careers outside of academia, and provide insight into the alternative paths available. The discussion panel and keynote speakers will explain their journey into alternative careers in ...

Una vez descubiertos los siARN y la existencia en las células de proteínas que catalizan la degradación del mRNA, los investigadores se preguntaron si los siARN también estaban codificados en el genoma, y empezaron a purificar pequeños ARN (19-25 nt) a partir de diferentes especies animales. Sin embargo, no encontraron siARN, sino los denominados micro-ARN, que se habían ...

COVER Cancer immunotherapy harnesses the power of the immune system to kill tumors. These therapies aim to activate and expand T cells, such as those shown in blue, to specifically kill tumors (black).

Cancer is a disease of the genome. Tumors from mutagenic cancers such as melanoma can harbor up to 1 million mutations, making it challenging to understand which mutations are central to the disease and which are simply passengers. Grasping the functional consequences of different mutations is vital: Can we predict whether a patient will respond to chemotherapy or immunotherapy, or which ...

ThyCa: Thyroid Cancer Survivors' Association, Inc. is a non-profit 501(c)(3) organization (tax ID #52-2169434) of thyroid cancer survivors, family members, and health care professionals. We are dedicated to support, education, and communication for thyroid cancer survivors, their families and friends.

I microRNA (miRNA) sono piccole molecole endogene di RNA non codificante a singolo filamento riscontrate nel trascrittoma di piante, animali e alcuni virus a DNA. Si tratta di polimeri codificati dal DNA nucleare eucariotico lunghi circa 20-22 nucleotidi e principalmente attivi nella regolazione dell'espressione genica a livello trascrizionale e post-trascrizionale.

Insufficient tissue oxygenation, or hypoxia, contributes to tumor aggressiveness and has a profound impact on clinical outcomes in cancer patients.

### **Therapeutic targeting of hypoxia and hypoxia-inducible**

Abstract. Cancer stem cells (CSCs) with self-renewal abilities endorse cellular heterogeneity, resulting in metastasis and recurrence. However, there are no promising therapeutics directed against CSCs.
