approach to mining graph data is finding efficient mapping functions and good feature vectors. The pioneering work that applied kernel functions to graph structures is the diffusion kernel [12]. We perform an experimental comparison of graph-based and logic-based MRDM. We identify three key factors for com-

Comparison of Graph-based and Logic-based Multi-relational

Whereas data-mining in structured data focuses on frequent data values, in semi-structured and graph data mining, the structure of the data is just as important as its content. We study the problem of discovering typical patterns of graph data.
