in Web Usage Mining are association rule generation, sequential pattern generation, and clustering. Association Rule mining techniques [1] discover unordered correlations between items found in a database of transactions. In the context of Web Usage Mining a transaction is a group of Web page accesses, with an item being a single page access.

Data Preparation for Mining World Wide Web Browsing Patterns

Web Usage Mining is the application of data mining techniques to large Web data repositories in order to produce results that can be used in the design tasks mentioned above. Some of the data mining algorithms that are commonly used in Web Usage Mining are association rule generation, sequential pattern generation, and clustering.
