The heat shock response (HSR) is a cellular response that increases the number of molecular chaperones to combat the negative effects on proteins caused by stressors such as increased temperatures, oxidative stress, and heavy metals. In a normal cell, protein homeostasis (proteostasis) must be maintained because proteins are the main functional units of the cell.

The molecular chaperones Hsp70 and Hsp90 form a fast-acting relay team to prepare proteins to fold into their active state on their own. Hsp70 recognizes short hydrophobic stretches (yellow ...

Folding, modification, and degradation of proteins The life of a protein can briefly be described as: synthesis, folding, modification, function, degradation.

Aging is associated with a decline in mitochondrial function and the accumulation of abnormal mitochondria. However, the precise mechanisms by which aging promotes these mitochondrial alterations and the role of the latter in aging are still not fully understood. Mitochondrial dynamics is a key process regulating mitochondrial function and quality.

From the molecular perspective, cisplatin represents a perfect example of how a small alteration in chemical structure can significantly affect biological activity in target cell (Goodsell, 2006). As illustrated in Fig. 2, cisplatin, carboplatin and oxaliplatin are composed of doubly charged platinum ion surrounded by four ligands, with the amine ligands on the left forming stronger ...

The protein quality control system (PQC) present in living organism has evolved over years to ensure proper protein folding, trafficking and degradation of misfolded proteins , , . Still a large number of proteins are not able to reach or maintain their native state which subsequently leads to their misfolding .The misfolded proteins when cannot be refolded by molecular chaperones, then they ...

Abstract. Tyrosine kinases are important mediators of the signaling cascade, determining key roles in diverse biological processes like growth, differentiation, metabolism and apoptosis in response to external and internal stimuli.

Submission Method A journals make the final published version of all NIH-funded articles available in PubMed Central (PMC) no later than 12 months after publication without author involvement. The start date shown for each journal is the earliest publication date that meets this requirement. Enter a journal name below to see if it uses Submission Method A.
