

motor protection relay setting pdf

Setting of the motor protection relay is based on the motor datasheets information and system configuration. Datasheets are normally provided by motor manufacturer. System configuration data can be obtained from single line diagram.

Motor Protective Settings 101308 - L 3

Set slightly above the motor service factor by 8-10% to account for measuring errors. If RTD Biasing of Thermal Model is used, thermal overload setting can be set higher. Note: motor feeder cables are normally sized at 1.25 times motor's full load current rating, which would limit the motor overload pickup setting to a maximum of 125%.

Motor Protection Relay Setting Calculation Pdf

3. Set the scaling factor (Relay settings/p.u. scaling factor). 4. Set the weighting factor for the thermal protection (Weighting factor). 5. Specify the hot and cold starts (Hot/Cold starts). 6. Calculate the motor stall time (Stall time, t_{6x}). 7. Check the thermal behaviour (Thermal behaviour). 8. Set/calculate the remaining relay settings (Relay settings).

- Set an expected start-up time to reach the normal current of load. If you do not know it, set to 15sec at first and start-up the motor to measure the time to reach the normal operation current by monitoring the displayed current and then set the time at 2 sec longer than the time measured.
