There may also be matrix effects which can result in under-estimating the amount of mycotoxin, unless appropriate extraction methods for different foods are developed. Mycotoxins in foods occur frequently at low concentrations, with a number of samples below the limit of detection (LOD) and limit of quantification (LOQ).

Organization and the Food and Agriculture Organization of the United Nations have set up regulations and maximum levels for major mycotoxins in foods and feeds. To fulfill expectations of these regulatory limits, there is an increasing need for the development and validation of new, simple, fast and precise methods for toxins detection.

[1]. Regulations for major mycotoxins in commodities and food exist in at least 100 countries, most of which

are for aflatoxins; maximum tolerated levels differ greatly among countries [2]. The US Food and Drug Administration action levels and European Union regulations for aflatoxin are shown in Table 1 [1, 3-5].

A review of rapid methods for the analysis of mycotoxins

safety and quality of food. This paper provides a brief review of novel approaches and technologies for mycotoxin analysis including immunological detection, nucleic acid hybridization, polymerase chain reaction (PCR), mycotoxin biosynthetic gene, and combination assays for detection of fungi and mycotoxins.

Rapid Detection Methods for Analysis of Fungi and

Methods and tests to detect mycotoxins in milk. Fortunately, several methods are now available to discover mycotoxins and aflatoxins in food, feed and milk. Bio Scientific, a PerkinElmer company, has developed AutoFlow Aflatoxin M1 test strips treated with gold particles for rapid field and lab use in detecting the presence of the M1 toxin in milk.
