1. Basic concepts1.1.. Categories of nanostructured materialsOne of the very basic results of the physics and chemistry of solids is the insight that most properties of solids depend on the microstructure, i.e. the chemical composition, the arrangement of the atoms (the atomic structure) and the size of a solid in one, two or three dimensions.

Journal "BIOMEDICAL GLASSES" is accepting papers for Volume 4 Biomedical Glasses is a peer-reviewed, Open Access journal covering the field of glasses for biomedical applications. It provides an international forum for the publication of original research reports and authoritative review articles on biomedical glasses and their use in clinical applications.

Hydroxyapatite, also called hydroxylapatite (HA), is a naturally occurring mineral form of calcium apatite with the formula  $\text{Ca}_5(\text{PO}_4)_3(\text{OH})$ , but it is usually written  $\text{Ca}_{10}(\text{PO}_4)_6(\text{OH})_2$  to denote that the crystal unit cell comprises two entities. Hydroxyapatite is the hydroxyl endmember of the complex apatite group. The  $\text{OH}^-$  ion can be replaced by fluoride, chloride or carbonate ...

Nano Futures launches its 1st anniversary highlights collection To celebrate our first volume, we have gathered a selection of papers published in Nano Futures during its inaugural year to appear in this special commemorative collection. The papers in the collection will be free to read until the end of 2018.

Colloidal gold is a sol or colloidal suspension of nanoparticles of gold in a fluid, usually water. The colloid is usually either an intense red colour (for spherical particles less than 100 nm) or blue/purple (for larger spherical particles or nanorods). Due to their optical, electronic, and molecular-recognition properties, gold nanoparticles are the subject of substantial research, with ...
