Adaptive Critic Design, based on neural network models of the microfactory objects, can be used for manufacturing process optimization, while associative-projective neural networks and networks like ART could be used for the highest levels of control systems.

The results given in this book permit us to estimate optimistically the perspectives of neural network applications in micromechanics. We have been working on neural networks, image recognition, and microme-

Applications of Neural Networks in Micromechanics

Abstract. A computer vision system permits one to provide feedback, which increases the precision of the manufacturing process. It could be used in low-cost micromachine tools and micromanipulators for microdevice production.

Neural network jargon
• activation: the output value of a hidden or output unit
• epoch: one pass through the training instances during gradient descent
• transfer function: the function used to compute the output of a hidden/ output unit from the net input
• Minibatch: in practice, randomly partition data into many parts (e.g., 10
