Fluorinating Agents in Organic Chemistry [www.alfa.com](http://www.alfa.com) Electrophilic fluorination Elemental fluorine is one of the most chemically reactive substances known, due to the relative weakness of the F-F bond and the great strength of its bonds to most other elements, including hydrogen, carbon and silicon, illustrated in Table 1.

None of the products are new: the reactions were chosen simply to demonstrate the potential of NFQNF as an electrophilic fluorinating agent and to establish a comparison with other N-F reagents.

compounds. The fluorinating agents are roughly classified into two categories: nucleophilic and electrophilic. Nucleophilic fluorinating agents are those where the fluoride anion serves as a reaction active species. Electrophilic fluorinating agents are those where the electron-deficient fluorine atom serves as a reaction active species.

G. Sankar Lal, a native of Guyana, received the Ph.D. degree in natural products synthesis from the University of New Brunswick, Canada, in 1984. After postdoctoral assignments at Smith Kline Beecham Laboratories and Drexel University, he joined Air Products where he is now a Senior Principal Research Chemist.

Synthesis of 1,1,2,2-tetrafluoroethyl-N,N-dimethylamine (1) is carried out using a slightly modified literature procedure. Reaction of dimethylamine (DMA) and tetrafluoroethylene (TFE) is conducted in closed pressurized vessel without a solvent.

fluorinating agents is given in Table 7. A survey of physical constants and applications of individual inorganic fluorides in the preparation of organic fluorine compounds is shown in Table 8. ORGANIC FLUORIDES The number of organic fluorinating agents is small but is gradually increasing.

These new insights into the nature of the NF bond were used to propose and design a new class of fluorinating agents. Hypervalent amine-chalcogenides turned out as most promising candidates for efficient electrophilic fluorinating agents.

Elemental fluorine and many electrophilic fluorinating agents have been used in synthesis; however, most of

these fluorinating agents are highly aggressive, unstable, and require special equipment and care for safe handling. Sigma-Aldrich is pleased to offer the following alternatives, which lack these drawbacks.

Substantially, each new fluorinating agent reacts with alcohols yielding corresponding fluorides, equimolar amounts of appropriate 3,3,3-trifluoropropionamide and hydrogen fluoride (Reaction 4). In some cases, however, considerable amounts of by-products were formed, which causes lower yields of the fluorides, being major expected products.
