CHAPTER 48. NOISE AND VIBRATION CONTROL HVAC equipment for a building is one of the major sources of interior noise, and its effect on the acoustical environment is important. Further, noise from equipment located outdoors often propagates to the community.

CHAPTER 48. NOISE AND VIBRATION CONTROL

The mechanical vibration process can be subdivided into four main stages, generation-transmission-propagation-radiation. The transmission stage is often the best compromise for noise and vibration ...

Practical Guide to Noise and Vibration Control, Second Edition

Since it is difficult to extract the fan noise from engine spectra that contain other sources, most of the research on fan noise is done in fan rigs where the source can be isolated. Results from decades of tests have shown that fan tip speed and pressure ratio control the overall fan noise levels.
