Chapter 10 Nonlinear Models ¶ Nonlinear models can be classified into two categories. In the first category are models that are nonlinear in the variables, but still linear in terms of the unknown parameters. This category includes models which are made linear in the parameters via a transformation.

Nonlinear Models with Higher Powers of the Explanatory Variables. An additional source of nonlinearity arises when higher powers of explanatory variables (e.g., a squared term) are included in a nonlinear model. A squared term is an interaction between a continuous variable and itself, which is why this is of interest in this paper.

3 Nonlinear terms The main purpose of the gnm package is to provide a flexible framework for the specification and estimation of generalized models with nonlinear terms. The facility provided with gnm for the specification of nonlinear terms is designed to be compatible with the symbolic language used in formula objects.
