

### **nonlinear waves solitons and pdf**

In mathematics and physics, a soliton is a self-reinforcing solitary wave packet that maintains its shape while it propagates at a constant velocity. Solitons are caused by a cancellation of nonlinear and dispersive effects in the medium. (The term "dispersive effects" refers to a property of certain systems where the speed of the waves varies according to frequency.)

### **Soliton - Wikipedia**

Nonlinear optics (NLO) is the branch of optics that describes the behavior of light in nonlinear media, that is, media in which the dielectric polarization  $P$  responds nonlinearly to the electric field  $E$  of the light. The nonlinearity is typically observed only at very high light intensities (values of atomic electric fields, typically  $10^8$  V/m) such as those provided by lasers.

This paper studies the notion of  $W$ -measurable sensitivity in the context of semigroup actions.  $W$ -measurable sensitivity is a measurable generalization of sensitive dependence on initial conditions.

21.06.2005 A biometric system can be viewed as a pattern recognition system consisting of three main modules: the sensor module, the feature extraction module and the feature matching module. The design of such a system is studied in the context of many commonly used biometric modalities - fingerprint, face, speech, hand, iris.
