Numerical Modelling And Capacity Design Of Earthquake

The numerical results of pile bearing capacity and pile settlement were compared with static load test results
of CFA piles carried out during construction of ³azienkowska tract flyovers in Warsaw and with engineering
analytical calculations according to Eurocode 7 and Polish Standard Code.

Numerical Modelling and Bearing Capacity Analysis of Pile

This paper discusses the fracture-plastic material models for reinforced concrete and use of this model for
modelling of reinforced concrete beams. Load-displacement relations and bearing capacity of reinforced
concrete beams will be evaluated. A series of original (own) experiments - the beam and data from
completed experiments - have been chosen for the numerical modelling.
