For modeling object life cycles, we use a subset of the UML SM language. This subset comprises states, with one initial state and one or more final states, and transitions connecting the states. Transitions that are initiated by a particular triggering event can be labeled with a trigger label. As our main application is

### **Consistency of Business Process Models and Object Life Cycles**

Object Oriented Methodology Life Cycle Model. We live in a world of objects. These objects exist in nature, in man-made entities, in business, and in the products that we use. They can be categorized, described, organized, combined, manipulated and created. Therefore, an object-oriented view has come into picture for creation of computer software.
