

optical fiber fusion splicing pdf

Fusion splicing is performed with a piece of equipment called a fusion splicer. The fiber ends are prepared, cleaved, and placed in alignment fixtures on the fusion splicer.

In fusion splicing, splice loss is a direct function of the angles and quality of the two fiber-end faces. The closer to 90 degrees the cleave angle is the lower optical loss the splice will yield. The quality of the cleave tool being used is critical.

Fusion splicing - Wikipedia

Fusion Splicing Fusion splicing is the process of fusing or welding two fibers together usually by an electric arc. Fusion splicing is the most widely used method of splicing as it provides for the lowest loss and least reflectance, as well as providing the strongest and most reliable joint between two fibers.
