In linguistics, Optimality Theory (frequently abbreviated OT; the term is normally capitalized by convention) is a linguistic model proposing that the observed forms of language arise from the optimal satisfaction of conflicting constraints. OT differs from other approaches to phonological analysis, such as autosegmental phonology and linear phonology (SPE), which typically use rules rather ...

Pareto efficiency or Pareto optimality is a state of allocation of resources from which it is impossible to reallocate so as to make any one individual or preference criterion better off without making at least one individual or preference criterion worse off. The concept is named after Vilfredo Pareto (1848–1923), Italian engineer and economist, who used the concept in his studies of ...

Under review as a conference paper at ICLR 2017 If  $P_r(x) > P_g(x)$ , then  $x$  is a point with higher probability of coming from the data than being a generated sample. This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of  $P$
