One of the key elements of becoming a more successful trader is the ability to absolutely master options trading risk management. And, contrary to what you might assume, it comes down to a couple simple things. Namely, determining and sticking to an optimal position sizing range for each trade and never allocating the full value of your account at one time.

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.

Bitcoin (BTC) is a cryptocurrency, a form of electronic cash. It is a decentralized digital currency without a central bank or single administrator that can be sent from user-to-user on the peer-to-peer bitcoin network without the need for intermediaries. Transactions are verified by network nodes through cryptography and recorded in a public distributed ledger called a blockchain.
