The transport of oxygen between tissue and arterial blood on the surface of the blood vessels is represented by the reaction terms in the macroscopic equations. Additionally, in the

Homogenization of oxygen transport in biological tissues

• Transport of oxygen during external respiration: • With its low solubility, only approximately 1.5% of the oxygen is transported dissolved in plasma. • The remaining 98.5% diffuses into red blood cells and chemically combines with hemoglobin.

An understanding of the key steps in oxygen transport within the body is essential to avoid tissue hypoxia. Physiology of oxygen transport Although oxygen is the substrate that cells use in the greatest quantity and on which aerobic metabolism and cell integrity depend, the tissues have no storage system for oxygen.

ABC of oxygen: Oxygen transport 1. Basic principles

ABSTRACT. This presentation describes various aspects of the regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system.
