Pairing-based cryptography has been adopted commercially. The two largest companies in this field are Voltage Security (co-founded by Boneh), and Trend Micro. In 2008, the National Institute of Standards and Technology (NIST) held a workshop on pairing-based cryptography. Over 80 people from academia, government and industry attended. Dr.

Report on Pairing-based Cryptography

Pairing-based cryptography is a relatively young area of cryptography that revolves around a certain function with special properties.

An Introduction to Pairing-Based Cryptography Alfred Menezes Abstract. Bilinear pairings have been used to design ingenious protocols for such tasks as one-round three-party key agreement, identity-based encryption, and aggregate signatures. Suitable bilinear pairings can be constructed from the Tate pairing for specially chosen elliptic curves.

An Introduction to Pairing-Based Cryptography

Pairing-based cryptography is the use of a pairing between elements of two cryptographic groups to a third group with a mapping $e: G \times G \rightarrow H$ to construct or analyze cryptographic systems.

protocol using Weil pairing. This is the first instance to show that pairings can be used for good". In Crypto 2001, Boneh and Fracklin [6] proposed a fully functional identity-based encryption scheme from Weil Pairing. After that, pairing-based cryptography has gotten a full development [1-14], because it has many beautiful and elegant properties.

Subgroup security in pairing-based cryptography

Pairing-based cryptography is a relatively young area of cryptography that revolves around a particular function with interesting properties. It allows the construction of novel cryptosystems that are otherwise difficult or impossible to assemble using standard primitives.

This book constitutes the refereed proceedings of the 5th International Conference on Pairing-Based Cryptography, Pairing 2012, held in Cologne, Germany, in May 2012. The 17 full papers for presentation at the academic track and 3 full papers for presentation at the industrial track were carefully reviewed and selected from 49 submissions.

The field of Pairing-Based Cryptography has exploded over the past 3 years [cry, DBS04]. The central idea is the construction of a mapping between two useful cryptographic groups which allows for new cryptographic schemes based on the reduction of one problem in one
