distributed computing technologies now allows aggregating and utilizing idle computing capability of loosely-connected computers or even supercomputers. This means employing parallel and distributed computing techniques to support computational bioengineering is not only feasible but also cost-effective.

The recent switch to parallel microprocessors is a milestone in the history of computing. Industry has laid out a roadmap for multicore designs that preserves the programming paradigm of the past via binary compatibility and cache coherence.

The Landscape of Parallel Computing Research: A View from

Grid computing is the most distributed form of parallel computing. It makes use of computers communicating over the Internet to work on a given problem. Because of the low bandwidth and extremely high latency available on the Internet, distributed computing typically deals only with embarrassingly parallel problems.
