620 Particle Physics and Cosmology Q46.9 The decays of the muon, tau, charged pion, kaons, neutron, lambda, charged sigmas, xi, and omega occur by the weak interaction. All have lifetimes longer than  $10^{13}$  s. Several produce neutrinos; none produce photons. Several violate strangeness conservation.

Particle Physics and Cosmology 3 Sixty-four years after the discovery of Hubble's law, Hubble's constant  $H_0$  is still not well known. It is traditional to express the uncertainty in Hubble's law in terms of a dimensionless parameter  $h$ :  $h = H_0 / 100 \text{ km s}^{-1} \text{ Mpc}^{-1}$  ( $0.4 < h < 0.8$ ).

Particle physics, which deals with the interactions of elementary particles at high energies, is an important component of cosmological models of the early universe, when the universe was dominated by radiation and its average energy density was very high.
