PCT, spin and statistics, and analytic wave front set

Abstract. A new, more general derivation of the spin-statistics and PCT theorems is presented. It uses the notion of the analytic wave front set of (ultra)distributions and, in contrast to the usual approach, covers nonlocal quantum fields.

It is shown how classical results of axiomatic field theory such as the PCT and spin-statistics theorem may be generalized to nonlocal tempered fields. The method is also applicable to the theory of essentially local non-localizable fields.

In quantum mechanics, the spin-statistics theorem relates the intrinsic spin of a particle to the particle statistics it obeys. In units of the reduced Planck constant \hbar , all particles that move in 3 dimensions have either integer spin or half-integer spin.
