Pedology, as defined by Lin in the introduction of this book, is focused on the study of undisturbed soils in the field. Soil classification and mapping have been important activities for pedology, supported by basic chemical and mineralogical research on soil features important for classification.

Pedology (soil study) - an overview | ScienceDirect Topics

Pedology is the study of soils in their natural environment. It is one of two main branches of soil science, the other being edaphology. Pedology deals with pedogenesis, soil morphology, and soil classification, while edaphology studies the way soils influence plants, fungi, and other living things.
