The landscape of cloud computing has significantly changed over the last decade. Not only have more providers and service offerings crowded the space, but also cloud infrastructure that was traditionally limited to single provider data centers is now evolving.

Next generation cloud computing: New trends and research

Concurrent computing is a form of computing in which several computations are executed during overlapping time periods "concurrently" instead of sequentially (one completing before the next starts). This is a property of a system "this may be an individual program, a computer, or a network" and there is a separate execution point or "thread of control" for each computation ("process").

Fig. 1 depicts the common phases of a traditional analytics workflow for Big Data. Data from various sources, including databases, streams, marts, and data warehouses, are used to build models. The large volume and different types of the data can demand pre-processing tasks for integrating the data, cleaning it, and filtering it.

This paper examines the role of information technology (IT) directly on one central aspect of work in the twenty-first century, its impact on HRM itself. We use the long-established "Harvard" model of HRM, offering a more contextualised view of HRM, a more expansive view of stakeholders, and a wider and more long-term approach to outcomes.

Conceptualising the future of HRM and technology research

Abstract. Indoor positioning systems (IPS) use sensors and communication technologies to locate objects in indoor environments. IPS are attracting scientific and enterprise interest because there is a big market opportunity for applying these technologies.

Evolution of Indoor Positioning Technologies: A Survey

My research investigates learning and information seeking with digital documents, from a cognitive and ergonomic point of view. I am also interested in cognitive load theory, human factors and HCI.
